

# THE STANDBY WIZARD FOR ORACLE

## Standby Database Software for the Oracle RDBMS

### FACT SHEET

#### I. Product Description

The Standby Wizard for Oracle is a sophisticated standby database tool designed exclusively for the Oracle RDBMS. Through an easy-to-use Java interface, the Standby Wizard allows you to create standby databases on all Windows, Linux, and Unix platforms. The Standby Wizard for Oracle also automates the synchronization of your primary and standby databases using intelligent self-starting agents. Through the Standby Wizard's Java interface, a DBA can monitor, rebuild, activate and diagnose any standby database configuration built with the Standby Wizard. If there is ever a disaster or loss-of-service, the Standby Wizard can be instructed to automatically activate a standby database without any human intervention. Graceful Switchback functions are also automated to make recovery to a production

server simple and error-free.

#### II. Features

- Compatible with Oracle Standard Edition RDBMS and Oracle Portal.
- OS-Independent Java GUI interface and server-based software.
- GUI interface to allow for the creation of an unlimited number of standby databases.
- Intelligent agents to automate the synchronization of your primary and standby database(s).
- Incremental Rebuild feature to allow for easy repair of Standby Database(s).
- Not dependent on Oracle Net\*8 for log transport services.
- Automated Log Gap detection and correction.
- Supports log compression and encryption capabilities for fast and secure network transfer.
- Automated activation rules defined through a simple GUI interface.
- Automated graceful switchback features for easy recovery after a disaster.
- Detailed redundant logging for fast troubleshooting.
- Extensive support, training, and customization services are offered with the Standby Wizard.

#### III. Requirements

The Standby Wizard for Oracle is the only platform-independent standby database tool in existence and will run on all Oracle RDBMS versions 8.1.5 and above - and thus will support all Unix, Linux, and Windows environments.

The Standby Wizard User Interface does require the Java JRE 1.3 or higher - this JRE automatically ships with all Oracle 9i installations.

#### IV. Conclusion

The Standby Wizard for Oracle is the only standby database tool in existence that runs on all flavors of the Oracle database and seamlessly across all OS platforms. Unlike the Data Guard offering, the Standby Wizard is easy to install and configure and requires less maintenance. Feel free to browse the Standby Wizard home page and download a fully-functional evaluation copy of the Standby Wizard for Oracle.
